

# Fahim Ramez

## Data Analyst

Computer Science graduate with experience in data analytics, machine learning, SQL, Python, and backend development. Skilled in analyzing large datasets, building predictive models, and developing data-driven applications using Python, pandas, scikit-learn, Java, and PostgreSQL. Seeking entry-level Data Analyst, Business Intelligence, or analytics-focused roles.

## Technical Skills

**Languages:** Python, SQL, Java, TypeScript, HTML, CSS
**Data & Analytics:** Pandas, NumPy, Scikit-learn, Feature Engineering, Data Visualization, Machine Learning
**Databases:** PostgreSQL, MySQL
**Frameworks & Tools:** Spring Boot, React, Git, GitHub, Maven

## Projects

### Healthcare Management System

Senior Project – Full Stack & Machine Learning, California State University Northridge
August 2025 - May 2026

Developed a full-stack healthcare management system in a 4-person team to manage patient records, prescriptions, appointments, and machine learning–based no-show prediction.

- Developed a machine learning model to predict patient no-shows using Python (scikit-learn), leveraging features such as appointment lead time and patient history.
- Designed and implemented backend architecture using Java (DAO, Service, Controller) integrated with PostgreSQL via JDBC.
- Built frontend components in TypeScript to support user interaction.
- Project repository: **GitHub**

### Instacart Reorder Prediction

Predictive Analytics & Machine Learning Project
Jan 2026 - May 2026

Built predictive models using Python and SQL to analyze over 33 million Instacart purchase records and predict customer reorder behavior.

- Trained Logistic Regression and Random Forest models using Python and scikit-learn.
- Achieved ~0.78 F1 score on sampled data by tuning models and improving feature selection.
- Performed data preprocessing, feature engineering, and model evaluation using pandas and scikit-learn.
- Project repository: **GitHub**

### Movie Recommendation System

Predictive Analytics & Machine Learning Project
Jan 2026 - May 2026

Built a hybrid movie recommendation system combining collaborative and content-based filtering.

- Implemented collaborative filtering using KNN on user-item rating data to identify similar users and generate rating-based recommendations.
- Developed a content-based model using movie features and cosine similarity to recommend similar items.
- Combined both approaches into a hybrid system to improve recommendation accuracy and personalization.
- Project repository: **GitHub**

### E-Commerce Application

E-Commerce Project, California State University Northridge
January 2025 – May 2025

Developed backend functionality for a full-stack e-commerce application supporting product browsing and order processing.

- Implemented backend functionality in Java for order processing, product management, and shopping cart logic.
- Designed structured data handling workflows to ensure reliable transaction processing.
- Project repository: **GitHub**

## Education

### California State University Northridge, 2022–2026

Bachelor of Science in Computer Science

Relevant coursework: Software Engineering, Database Systems, Machine Learning, Data Mining, Web Engineering, Data Structures & Algorithms.
